

Alan Nekhom

AI Strategist | Cloud & Compliance Executive | Author

Short Bio

Alan Nekhom is an AI strategist, cloud and compliance executive, and author of *Transcending Technobabble*, a forthcoming guide for leaders navigating AI and advanced technology. His career spans defense AI, ASIC semiconductor design and manufacturing, big data, cloud architecture, telecom, healthcare, and finance, giving him a practical lens on technology decisions where hype, risk, and consequence collide.

Longer Bio

Alan Nekhom is an AI strategist, cloud and compliance executive, and author of *Transcending Technobabble*, a forthcoming book for leaders who need to understand advanced technology without getting lost in jargon, hype, or false confidence.

His career began in defense AI and later moved into ASIC semiconductor design, manufacturing, and test, where AI techniques were applied to hard engineering problems long before today's generative AI boom. Since then, his work has spanned big data, cloud architecture, telecom, healthcare, finance, and enterprise systems.

Alan helps leaders evaluate where technology belongs, where it breaks, and what governance must exist before automation becomes consequence. His writing focuses on practical AI judgment, cloud and data strategy, decision quality, and responsible adoption.

He is also a coauthor of *Quantum Business Dynamics*, the foundational text for QBD, a framework for modeling governed, verifiable business relationships. His work is written for executives and serious practitioners who want decisions grounded in consequence, not fashion.
